Abbreviations and acronyms

ABCP	Asset-backed commercial paper
ABS	Asset-backed securities
AC	Amortised cost
AFS	Available-for-sale
ALCo	Asset and Liability Management Committee
AQ	Asset quality
AT1	Additional Tier 1
BCBS	Basel Committee on Banking Supervision
BoE	Bank of England
BRC	Board Risk Committee
CCF	Credit conversion factor
CCI	Credit Cycle Indices
CDO	Collateralised debt obligation
CDs	Certificates of deposit
CDS	Credit default swap
CEC	Control Environment Certification
CET1	Common equity tier 1
CI	Credit institution
CLO	Collateralised loan obligation
CMBS	Commercial mortgage-backed securities
COREP	CRR Common Reporting
CPB	Commercial & Private Banking
CRD	Capital Requirements Directive
CRE	Commercial real estate
CRR	Capital requirements regulation
CVA	Credit valuation adjustment
DFV	Designated as at fair value through profit or loss
DINED	Double Independent Non-Executive Director
DOIR	Date of initial recognition
DSIB	Domestic systemically important bank
DVA	Debit valuation adjustment
EAD	Exposure at default
EBA	European Banking Authority
EC	European Commission
ECB	European Central Bank
ECL	Expected credit losses
EIR	Effective interest rate
EMEA	Europe, the Middle East and Africa
EMV	Exogenous(macro-economic), maturity and vintage
ERF	Executive Risk Forum
ESE	Environment, Social and Ethical
EU	European Union
FCA	Financial Conduct Authority
FI	Financial Institution
FINREP	CRR Financial Reporting
FSB	Financial Stability Board
FSCS	Financial Services Compensation Scheme
FTSE	Financial Times Stock Exchange
FVA	Funding Valuation Adjustment
FVOCI	Fair value through other comprehensive income
GDP	Gross domestic product
GSIB	Global systemically important bank
HFT	Held-for-trading
HMT	HM Treasury
HPI	House Price Index
HTM	Held-to-maturity
IAS	International Accounting Standards
IASB	International Accounting Standards Board
ICAAP	Internal Capital Adequacy Assessment Process
IFRS	International Financial Reporting Standards
ILAAP	Internal Liquidity Adequacy Assessment Process
IPV	Independent price verification
IRB	Internal ratings based
IRC	Incremental risk charge
IRHP	Interest rate hedging product
LAR	Loans and receivables
LCR	Liquidity coverage ratio
LGD	Loss given default
LIBOR	London Interbank Offered Rate
LOBO	Lender option buyer option
LTI	Long term incentive awards
LTV	Loan-to-value
MDA	Maximum distributable amount
MES	Multiple economic scenarios
MFVTPL	Mandatory Fair value through profit or loss
MiFID	Markets in Financial Instruments Directive
MOC	Metrics Oversight Committee
MREL	Minimum requirement for own funds and eligible liabilities
MTNs	Medium term notes
NI	Northern Ireland
NIM	Net Interest Margin
NPE	Non-performing drawn exposure
NSFR	Net stable funding ratio
NTIRR	Non-traded interest rate risk
NWM	NatWest Markets
OCA	Own credit adjustment
OREC	Operational Risk Executive Committee
OTC	Over-the-counter
PBB	Personal & Business Banking
PD	Probability of default
PDMR	Persons Discharging Managerial Responsibility
POCI	Purchased or Originated credit impaired
PPI	Payment Protection Insurance

Abbreviations and acronyms

PPL	Potential problem loans
PRA	Prudential Regulation Authority
RBSG	The Royal Bank of Scotland Group plc
REIL	Risk elements in lending
RFB	Ring-fenced banking entities
RMBS	Residential mortgage-backed securities
RNIV	Risks not In VaR
ROI	Republic of Ireland
RoW	Rest of the World
RPI	Retail price index
RWA	Risk-weighted asset
SE	Structured entity
SEC	US Securities and Exchange Commission
SICR	Significant increase in credit risk
SME	Small and medium-sized enterprise
SVaR	Stressed value-at-risk
TLAC	Total loss absorbing capacity
TNAV	Tangible net asset value
TSR	Total Shareholder Return
SME	Small and medium-sized enterprise
UBI DAC	Ulster Bank Ireland Designated Activity Company
UK	United Kingdom
UK DoLSub	UK Domestic Liquidity Sub Group
UKGI	UK Government Investments Limited
UNP	National unemployment
US/USA	United States of America
VaR	Value-at-risk

Glossary of terms

Arrears - the aggregate of contractual payments due on a debt that have not been met by the borrower. A loan or other financial asset is said to be 'in arrears' when payments have not been made.

Asset-backed commercial paper (ABCP) - a form of asset-backed security generally issued by a commercial paper conduit.

Asset-backed securities (ABS) - securities that represent interests in specific portfolios of assets. They are issued by a structured entity following a securitisation. The underlying portfolios commonly comprise residential or commercial mortgages but can include any class of asset that yields predictable cash flows. Payments on the securities depend primarily on the cash flows generated by the assets in the underlying pool and other rights designed to assure timely payment, such as guarantees or other credit enhancements. Collateralised debt obligations, collateralised loan obligations, commercial mortgage backed securities and residential mortgage backed securities are all types of ABS.

Asset quality (AQ) band - probability of default banding for all counterparties on a scale of 1 to 10.

Assets under management - assets managed by RBS on behalf of clients.

Back-testing - statistical techniques that assess the performance of a model, and how that model would have performed had it been applied in the past.

Bank deposits - money deposited with RBS by banks and recorded as liabilities. They include money-market deposits, securities sold under repurchase agreements, federal funds purchased and other short term deposits. Deposits received from customers are recorded as customer deposits.

Basel III - in December 2010, the Basel Committee on Banking Supervision issued final rules: ‘Basel III: A global regulatory framework for more resilient banks and banking systems’ and ‘Basel III: International framework for liquidity risk measurement, standards and monitoring’.

Basis point - one hundredth of a per cent i.e. 0.01 per cent. 100 basis points is 1 per cent. Used when quoting movements in interest rates or yields on securities.

Buy-to-let mortgages - mortgages to customers for the purchase of residential property as a rental investment.

Capital requirements regulation (CRR) - refer to CRD IV.

Certificates of deposit (CDs) - bearer negotiable instruments acknowledging the receipt of a fixed term deposit at a specified interest rate.

Collateralised debt obligations (CDOs) - asset-backed securities for which the underlying asset portfolios are debt obligations: either bonds (collateralised bond obligations) or loans (collateralised loan obligations) or both. The credit exposure underlying synthetic CDOs derives from credit default swaps. The CDOs issued by an individual vehicle are usually divided in different tranches: senior tranches (rated AAA), mezzanine tranches (AA to BB), and equity tranches (unrated). Losses are borne first by the equity securities, next by the junior securities, and finally by the senior securities; junior tranches offer higher coupons (interest payments) to compensate for their increased risk.

Collateralised loan obligations (CLOs) - asset-backed securities for which the underlying asset portfolios are loans, often leveraged loans.

Collectively assessed loan impairment provisions –
IAS 39 - impairment loss provisions in respect of impaired loans, such as credit cards or personal loans, that are below individual assessment thresholds. Such provisions are established on a portfolio basis, taking account of the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends.
IFRS9 - referred to as modelled provisions. In addition to IAS39 approach (outlined above), modelled provisions now used for calculating ECL provisions on performing and defaulted exposures.

Commercial mortgage backed securities (CMBS) - asset-backed securities for which the underlying asset portfolios are loans secured on commercial real estate.

Commercial paper (CP) - unsecured obligations issued by a corporate or a bank directly or secured obligations (asset-backed CP), often issued through a commercial paper conduit, to fund working capital. Maturities typically range from two to 270 days. However, the depth and reliability of some CP markets means that issuers can repeatedly roll over CP issuance and effectively achieve longer term funding. CP is issued in a wide range of denominations and can be either discounted or interest-bearing.

Commercial paper conduit - a structured entity that issues commercial paper and uses the proceeds to purchase or fund a pool of assets. The commercial paper is secured on the assets and is redeemed either by further commercial paper issuance, repayment of assets or liquidity drawings.

Commercial real estate (CRE) - freehold and leasehold properties used for business activities. Commercial real estate includes office buildings, industrial property, medical centres, hotels, retail stores, shopping centres, agricultural land and buildings, warehouses, garages etc.

Commodity price risk - the risk that the fair value of a position will alter due to a change in commodity prices.

Common Equity Tier 1 capital (CET1) - the highest quality form of regulatory capital under Basel III comprising common shares issued and related share premium, retained earnings and other reserves excluding reserves which are restricted or not immediately available, less specified regulatory adjustments.

Glossary of terms

Contractual maturity - the date in the terms of a financial instrument on which the last payment or receipt under the contract is due for settlement.

Cost:income ratio - operating expenses as a percentage of total income.

Counterparty credit risk - the risk that a counterparty defaults before the maturity of a derivative or sale and repurchase contract. In contrast to non-counterparty credit risk, the exposure to counterparty credit risk varies by reference to a market factor (e.g. interest rate, exchange rate, asset price).

Coverage ratio – Expected Credit Loss/impairment provisions as a percentage of loans.

Covered bonds - debt securities backed by a portfolio of mortgages that are segregated from the issuer's other assets solely for the benefit of the holders of the covered bonds.

CRD IV - the European Union has implemented the Basel III capital proposals through the CRR and the CRD, collectively known as CRD IV. CRD IV was implemented on 1 January 2014. The EBA's technical standards are still to be finalised through adoption by the European Commission and implemented within the UK.

Credit default swap (CDS) - a contract where the protection seller receives premium or interest-related payments in return for contracting to make payments to the protection buyer upon a defined credit event in relation to a reference financial asset or portfolio of financial assets. Credit events usually include bankruptcy, payment default and rating downgrades.

Credit derivatives - contractual agreements that provide protection against a credit event on one or more reference entities or financial assets. The nature of a credit event is established by the protection buyer and protection seller at the inception of a transaction, and such events include bankruptcy, insolvency or failure to meet payment obligations when due. The buyer of the credit derivative pays a periodic fee in return for a payment by the protection seller upon the occurrence of a credit event. Credit derivatives include credit default swaps, total return swaps and credit swap options.

Credit enhancements - techniques that improve the credit standing of financial obligations; generally those issued by a structured entity in a securitisation. External credit enhancements include financial guarantees and letters of credit from third party providers. Internal enhancements include excess spread - the difference between the interest rate received on the underlying portfolio and the coupon on the issued securities; and over-collateralisation – at inception, the value of the underlying portfolio is greater than the securities issued.

Credit grade - a rating that represents an assessment of the creditworthiness of a customer. It is a point on a scale representing the probability of default of a customer.

Credit risk - the risk of financial loss due to the failure of a customer, or counterparty, to meet its obligation to settle outstanding amounts.

Credit risk mitigation - reducing the credit risk of an exposure by application of techniques such as netting, collateral, guarantees and credit derivatives.

Credit spread risk - the risk that the value of a position will alter due to changes in the real or market-perceived ability of a borrower to pay related cash flows or obligations.

Credit valuation adjustment (CVA) - the CVA is the difference between the risk-free value of a portfolio of trades and its market value, taking into account the counterparty's risk of default. It represents the market value of counterparty credit risk, or an estimate of the adjustment to fair value that a market participant would make to reflect the creditworthiness of its counterparty.

Currency swap - an arrangement in which two parties exchange specific principal amounts of different currencies at inception and subsequently interest payments on the principal amounts. Often, one party will pay a fixed rate of interest, while the other will pay a floating rate (though there are also fixed-fixed and floating-floating currency swaps). At the maturity of the swap, the principal amounts are usually re-exchanged.

Customer deposits - money deposited with RBS by counterparties other than banks and classified as liabilities. They include demand, savings and time deposits; securities sold under repurchase agreements; and other short term deposits. Deposits received from banks are classified as bank deposits.

Date of initial recognition (DOIR) - the reference date used to assess a significant increase in credit risk is as follows. Term lending: the date the facility became available to the customer. Wholesale revolving products: the date of the last substantive credit review (typically annual) or, if later, the date facility became available to the customer. Retail Cards: the account opening date or, if later, the date the card was subject to a regular three year review or the date of any subsequent limit increases. Current accounts/overdrafts: the account opening date or, if later, the date of initial granting of overdraft facility or of limit increases.

Debit valuation adjustment (DVA) - an adjustment made in valuing OTC derivative liabilities to reflect the entity's own credit risk.

Debt securities - transferable instruments creating or acknowledging indebtedness. They include debentures, bonds, certificates of deposit, notes and commercial paper. The holder of a debt security is typically entitled to the payment of principal and interest, together with other contractual rights under the terms of the issue, such as the right to receive certain information. Debt securities are generally issued for a fixed term and redeemable by the issuer at the end of that term. Debt securities can be secured or unsecured.

Debt securities in issue - unsubordinated debt securities issued by RBS. They include commercial paper, certificates of deposit, bonds and medium-term notes.

Default/credit impairment - to determine the risk of a default occurring, management applies a default definition that is consistent with the Basel/regulatory definition of default. Assets that are defaulted are shown as credit impaired. RBS uses 90 days past due as a consistent measure for default across all product classes. The population of credit impaired assets is broadly consistent with IAS 39, though measurement differs because of the application of MES. Assets that were categorised as potential problems with no impairment provision are now categorised as Stage 3.

Glossary of terms

Deferred tax asset - income taxes recoverable in future periods as a result of deductible temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in tax deductible amounts in future periods) and the carry-forward of tax losses and unused tax credits.

Deferred tax liability - income taxes payable in future periods as a result of taxable temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in taxable amounts in future periods).

Defined benefit obligation - the present value of expected future payments required to settle the obligations of a defined benefit plan resulting from employee service.

Defined benefit plan/scheme - pension or other post-retirement benefit plan other than a defined contribution plan.

Defined contribution plan/scheme - pension or other post-retirement benefit plan where the employer's obligation is limited to its contributions to the fund.

Derivative - a contract or agreement whose value changes with changes in an underlying variable such as interest rates, foreign exchange rates, share prices or indices and which requires no initial investment or an initial investment that is smaller than would be required for other types of contracts with a similar response to market factors. The principal types of derivatives are: swaps, forwards, futures and options.

Designated hedges - economic risks that have been hedged by one or more designated financial instruments in accordance with IFRS.

Discontinued operation - a component of RBS that either has been disposed of or is classified as held for sale. A discontinued operation is either: a separate major line of business or geographical area of operations or part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations; or a subsidiary acquired exclusively with a view to resale.

Economic capital - an internal measure of the capital required by RBS to support the risks to which it is exposed.

Economic hedges - economic risks whose hedges have not been designated in accordance with IFRS.

Economic profit - the difference between the return on shareholders funds and the cost of that capital. Economic profit is usually expressed as a percentage.

Effective interest rate method - the effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Encumbrance - an interest in an asset held by another party. Encumbrance usually restricts the asset's transferability until the encumbrance is removed.

Equity price risk - the risk that the fair value of a position will alter due to a change in equity prices.

Equity risk - the risk of changes in the market price of the equities or equity instruments arising from positions, either long or short, in equities or equity-based financial instruments.

Eurozone - the 19 European Union countries that have adopted the euro: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia and Spain.

Expected credit loss (ECL, an IFRS 9 accounting measure) – generally is the weighted average of credit losses; for modelled portfolios it is the product of the exposure, probability of default at the reporting date and the lifetime loss given default. At initial recognition of a financial asset, an allowance is made for the 12 month expected credit loss (Stage 1), using the probability of default in the first 12 months only. Following a significant increase in credit risk (Stage 2), the expected credit loss is increased to the lifetime probability of default. ECL is applied to financial assets and contractual facilities whose performance is not recognised at fair value through P&L in the income statement.

Expected loss (EL, a regulatory measure) – is the product of the regulatory credit exposure, the probability of default over the next 12 months, averaged through an economic cycle, and the downturn loss given default. It is applied to exposures whether performance is recognised in income or reserves. Credit exposures include all financial assets, customer facilities and are subject to regulatory overlays.

Exposure - a claim, contingent claim or position which carries a risk of financial loss.

Exposure at default (EAD) -
Basel - an estimate of the extent to which the bank will be exposed under a specific facility, in the event of the default of a counterparty.
IFRS9 - expected balance sheet exposure at default. It differs from the regulatory method as follows:
– It includes the effect of amortisation; and
– It caps exposure at the contractual limit.

FICO score - a credit score calculated using proprietary software developed by the Fair Isaac Corporation in the US from a consumer's credit profile. The scores range between 300 and 850 and are used in credit decisions made by banks and other providers of credit.

Financial Conduct Authority (FCA) - the statutory body responsible for conduct of business regulation and supervision of UK authorised firms from 1 April 2013. The FCA also has responsibility for the prudential regulation of firms that do not fall within the PRA's scope.

Glossary of terms

Financial Services Compensation Scheme (FSCS) - the UK's statutory fund of last resort for customers of authorised financial services firms. It pays compensation if a firm is unable to meet its obligations. The FSCS funds compensation for customers by raising management expenses levies and compensation levies on the financial services industry.

First/second lien - a lien is a charge such as a mortgage held by one party, over property owned by a second party, as security for payment of some debt, obligation, or duty owed by that second party. The holder of a first lien takes precedence over all other encumbrances on that property i.e. second and subsequent liens.

Forbearance - forbearance takes place when a concession is made on the contractual terms of a loan in response to a customer's financial difficulties.

Foreign currency price risk - the risk that the fair value of a position will alter due to a change in foreign exchange rates.

Forward contract - a contract to buy (or sell) a specified amount of a physical or financial commodity, at an agreed price, at an agreed future date.

Forward-looking and multiple scenarios - the evaluation of future cash flows, the risk of default and impairment loss should take into account expectations of economic changes that are reasonable. More than one outcome should be considered to ensure that the resulting estimation of impairment is not biased towards a particular expectation of economic growth.

Futures contract - a contract which provides for the future delivery (or acceptance of delivery) of some type of financial instrument or commodity under terms established at the outset. Futures differ from forward contracts in that they are standardised and traded on recognised exchanges and rarely result in actual delivery; most contracts are closed out prior to maturity by acquisition of an offsetting position.

G10 - the Group of Ten comprises the eleven industrial countries (Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom and the United States) that have agreed to participate in the International Monetary Fund's (IMF's) General Arrangements to Borrow.

Government Sponsored Enterprises (GSEs) - a group of financial services corporations created by the US Congress. Their function is to improve the efficiency of capital markets and to overcome statutory and other market imperfections which otherwise prevent funds from moving easily from suppliers of funds to areas of high loan demand. They include the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association.

Gross yield - the interest rate earned on average interest-earning assets i.e. interest income divided by average interest-earning assets.

Haircut - a downward adjustment to collateral value to reflect its nature and any currency or maturity mismatches between the collateral and the exposure it secures.

Hedge funds - pooled investment vehicles that are not widely available to the public; their assets are managed by professional asset managers who participate in the performance of the fund.

Impaired loans - all loans which are in default for which a Stage 3 impairment provision has been established either by way of individual or modelled assessment.

Impairment losses - (a) for impaired financial assets measured at amortised cost or FVOCI, impairment losses - the difference between carrying value and the present value of estimated future cash flows discounted at the asset's original effective interest rate - are recognised in profit or loss and the carrying amount of the financial asset reduced by establishing a provision (allowance) (b) for fair value through P&L assets, the cumulative loss that had been recognised directly in equity is removed from equity and recognised in profit or loss as an impairment loss.

Individually assessed loan impairment provisions –
IAS39 - impairment loss provisions for individually significant impaired loans assessed on a case-by-case basis, taking into account the financial condition of the counterparty and any guarantor and the realisable value of any collateral held.
IFSR9 - as above but adjusted for average weighted MES.

Interest rate risk - the risk that a position's fair value will alter due to a change in the absolute level of interest rates, in the spread between two rates, in the shape of a yield curve or in any other interest rate relationship.

Interest rate swap - a contract under which two counterparties agree to exchange periodic interest payments on a predetermined monetary principal, the notional amount.

Interest spread - the difference between the gross yield and the interest rate paid on average interest-bearing liabilities.

Internal Capital Adequacy Assessment Process (ICAAP) - RBS's own assessment, as part of Basel III requirements, of its risks, how it intends to mitigate those risks and how much current and future capital is necessary having considered other mitigating factors.

Internal funding of trading business - the internal funding of the trading book comprises net banking book financial liabilities that fund financial assets in RBS's trading portfolios. Interest payable on these financial liabilities is charged to the trading book.

Internal Liquidity Adequacy Assessment Process (ILAAP) - an ongoing exercise as part of the PRA's regulatory framework to comply with best practice and regulatory standards for liquidity management.

International Accounting Standards Board (IASB) - the independent standard-setting body of the IFRS Foundation. Its members are responsible for the development and publication of International Financial Reporting Standards (IFRSs) and for approving Interpretations of IFRS as developed by the IFRS Interpretations Committee.

Glossary of terms

International Swaps and Derivatives Association (ISDA) master agreement - a standardised contract developed by ISDA for bilateral derivatives transactions. The contract grants legal rights of set-off for derivative transactions with the same counterparty.

Investment grade - generally represents a risk profile similar to a rating of BBB-/Baa3 or better, as defined by independent rating agencies.

Key management - members of the RBS Executive Committee.

L-SREP - An annual Liquidity Supervisory Review and Evaluation Process with the PRA, that involves a comprehensive review of the RBS ILAAP, liquidity policies and risk management framework.

Latent loss provisions - loan impairment provisions held under IAS39 against impairments in the performing loan portfolio that have been incurred as a result of events occurring before the balance sheet date but which have not been identified at the balance sheet date.

Level 1 - level 1 fair value measurements are derived from quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.
Level 2 - level 2 fair value measurements use inputs, other than quoted prices included within level 1, that are observable for the asset or liability, either directly or indirectly.

Level 3 - level 3 fair value measurements use one or more unobservable inputs for the asset or liability.

Leverage ratio - a measure prescribed under Basel III. It is the ratio of Tier 1 capital to total exposures. Total exposures include on-balance sheet items, off-balance sheet items and derivatives, and generally follow the accounting measure of exposure.

Lifetime Probability of default (PD) - the likelihood that a customer will fail to make full and timely repayment of credit obligations over the lifetime of the asset.

Liquidity and funding risk - the risk that RBS is unable to meet its financial liabilities when they fall due.

Liquidity coverage ratio (LCR) - the ratio of the stock of high quality liquid assets to expected net cash outflows over the following 30 days. High quality liquid assets should be unencumbered, liquid in markets during a time of stress and, ideally, central bank eligible.

Loan:deposit ratio - the ratio of customer loans - amortised cost net of provision for impairment losses and excluding reverse repurchase agreements to customer deposits excluding repurchase agreements.

Loan impairment provisions –
IAS39 - loan impairment provisions are established to recognise incurred impairment losses on a portfolio of loans classified as loans and receivables and carried at amortised cost. It has three components: individually assessed loan impairment provisions, collectively assessed loan impairment provisions and latent loss provisions.
IFRS9 – loan impairment provisions are established on an expected loss (forward looking) basis on financial assets. It has four components: Individually assessed loan impairment provisions, modelled Stage 3, modelled Stage 2 Lifetime ECL and modelled Stage 1-12 month ECL.

Loan-to-value ratio - the amount of a secured loan as a percentage of the appraised value of the security e.g. the outstanding amount of a mortgage loan as a percentage of the property's value.

London Interbank Offered Rate (LIBOR) - the benchmark interest rate at which banks can borrow funds from other banks in the London interbank market.

Loss given default (LGD) - is a current assessment of the amount that will be recovered in the event of default, taking account of future conditions. It may occasionally equate to the regulatory view albeit with conservatism and downturn assumptions generally removed.

Master netting agreement - an agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on, or termination of, any one contract.

Maximum distributable amount (MDA) - a restriction on distributions which may be made by a bank which does not meet the combined buffer requirements as set out in the PRA Supervisory Statement SS6/14 'Implementing CRD IV: capital buffers'.

Medium term notes (MTNs) - debt securities usually with a maturity of five to ten years, but the term may be less than one year or as long as 50 years. They can be issued on a fixed or floating coupon basis or with an exotic coupon; with a fixed maturity date (non-callable) or with embedded call or put options or early repayment triggers. MTNs are generally issued as senior unsecured debt.

Minimum requirement for own funds and eligible liabilities (MREL) – Tier 1 and Tier 2 capital plus specific loss absorbing instruments, including senior notes, that may be used to cover certain gone concern requirements in the EU.

Model Risk Management - performs independent model validation for material models where necessary.

Glossary of terms

Modelled ECL - impairment loss provisions in respect of impaired loans, such as credit cards or personal loans, that are below individual assessment thresholds. Such provisions are established on a portfolio basis, taking account of the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends.

Modification - a modification occurs when the contractual cash flows of a financial asset are renegotiated or otherwise modified and the renegotiation or modification does not result in derecognition. A modification requires immediate recognition in the income statement of any impact on the carrying value and effective interest rate (EIR) or examples of modification events include forbearance and distressed restructuring. The financial impact is recognised in the income statement as an impairment release/(loss).

Monoline insurers (monolines) - entities that specialise in providing credit protection against the notional and interest cash flows due to the holders of debt instruments in the event of default. This protection is typically in the form of derivatives such as credit default swaps.

Monte Carlo Simulation - simulates a large number of alternative scenarios around a central scenario.

Mortgage-backed securities - asset-backed securities for which the underlying asset portfolios are loans secured on property. See Residential mortgage backed securities and Commercial mortgage backed securities.

Multiple economic scenarios (MES) - Retail: the selection of a central base case economic prediction, with two upside and two downside scenarios around this point. Wholesale: uses the same base scenario but adopts Monte simulations.

Net interest income - the difference between interest receivable on financial assets classified as loans and receivables or available-for-sale and interest payable on financial liabilities carried at amortised cost.

Net interest margin - net interest income as a percentage of average interest-earning assets.

Net stable funding ratio (NSFR) - the ratio of available stable funding to required stable funding over a one year time horizon, assuming a stressed scenario. Available stable funding includes items such as equity capital, preferred stock with a maturity of over one year and liabilities with an assessed maturity of over one year.

Non-performing loans - loans classified as Risk elements in lending and potential problem loans (IAS39) or Stage 3 (IFRS9). They have a 100% probability of default and have been assigned an AQ10 internal credit grade.

Non-traded market risk - non-traded market risk is the risk to the value of assets or liabilities outside the trading book, or the risk to income, that arises from changes in market prices such as interest rates, foreign exchange rates and equity prices, or from changes in managed rates.

Operational risk - the risk of loss resulting from inadequate or failed processes, people, systems or from external events.

Option - an option is a contract that gives the holder the right but not the obligation to buy (or sell) a specified amount of an underlying physical or financial commodity, at a specific price, at an agreed date or over an agreed period. Options can be exchange-traded or traded over-the-counter.

Over-the-counter (OTC) derivatives - derivatives with tailored terms and conditions negotiated bilaterally, in contrast to exchange traded derivatives that have standardised terms and conditions.

Own credit adjustment (OCA) - the effect of the RBS's own credit standing on the fair value of financial liabilities.

Past due - a financial asset such as a loan is past due when the counterparty has failed to make a payment when contractually due.

Pillar 1 - the part of CRD IV that sets out the process by which regulatory capital requirements should be calculated for credit, market and operational risk.

Pillar 2 - Pillar 2 is intended to ensure that firms have adequate capital to support all the relevant risks in their business and is divided into capital held against risks not captured or not fully captured by the Pillar 1 regulations (Pillar 2A) and risks to which a firm may become exposed over a forward-looking planning horizon (Pillar 2B). Capital held under Pillar 2A, in addition to the Pillar 1 requirements, is the minimum level of regulatory capital a bank should maintain at all times to cover adequately the risks to which it is or might be exposed, and to comply with the overall financial adequacy rules. Pillar 2B is a capital buffer which helps to ensure that a bank can continue to meet minimum requirements during a stressed period, and is determined by the PRA evaluating the risks to which the firm may become exposed (e.g. due to changes to the economic environment) during the supervisory review and evaluation process. All firms will be subject to a PRA buffer assessment and the PRA will set a PRA buffer only if it judges that the CRD IV buffers are inadequate for a particular firm given its vulnerability in a stress scenario, or where the PRA has identified risk management and governance failings, which the CRD IV buffers are not intended to address.

Pillar 3 - the part of CRD IV that sets out the information banks must disclose about their risks, the amount of capital required to absorb them, and their approach to risk management. The aim is to strengthen market discipline.

Potential future exposure - is a measure of counterparty risk/credit risk. It is calculated by evaluating existing trades done against the possible market prices in future during the lifetime of the transactions.

Potential problem loans (PPL) - (IAS39) - loans for which an impairment event has taken place but no impairment loss is expected. This category is used for advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

PRA Rule Book - contains provisions made by the PRA that apply to PRA authorised firms. Within 'Banking and Investment Rules', the Capital Requirements firms' section applies to RBS.

Glossary of terms

Private equity - equity investments in operating companies not quoted on a public exchange. Capital for private equity investment is raised from retail or institutional investors and used to fund investment strategies such as leveraged buyouts, venture capital, growth capital, distressed investments and mezzanine capital.

Probability of default (PD) - the likelihood of default assessed on the prevailing economic conditions at the reporting date (point in time), adjusted to take into account estimates of future economic conditions that are likely to impact the risk of default; it will not equate to a long run average.

Prudential Regulation Authority (PRA) - the statutory body responsible for the prudential supervision of banks, building societies, insurers and a small number of significant investment firms in the UK. The PRA is a subsidiary of the Bank of England.

Regulatory capital - the amount of capital that RBS holds, determined in accordance with rules established by the PRA for the consolidated Group and by local regulators for individual Group companies.

Repurchase agreement (Repo) - refer to Sale and repurchase agreements.

Residential mortgage - a loan to purchase a residential property where the property forms collateral for the loan. The borrower gives the lender a lien against the property and the lender can foreclose on the property if the borrower does not repay the loan per the agreed terms. Also known as a home loan.

Residential mortgage backed securities (RMBS) - asset-backed securities for which the underlying asset portfolios are residential mortgages. RBS RMBS classifications, including prime, non-conforming and sub-prime, reflect the characteristics of the underlying mortgage portfolios. RMBS are classified as prime RMBS where the loans have low default risk and are made to borrowers with good credit records and reliable payment histories and there is full documentation. Non-conforming RMBS include US Alt-A RMBS, together with RMBS in jurisdictions other than the US where the underlying mortgages are not classified as either prime or sub-prime. Classification of RMBS as subprime or Alt-A is based on Fair Isaac Corporation (FICO) scores, level of documentation and loan-to-value ratios of the underlying mortgage loans. US RMBS are classified as sub-prime if the mortgage portfolio comprises loans with FICO scores between 500 and 650 with full or limited documentation. Mortgages in Alt-A RMBS portfolios have FICO scores of 640 to 720, limited documentation and an original LTV of 70% to 100%. In other jurisdictions, RMBS are classified as sub-prime if the mortgage portfolio comprises loans with one or more high risk characteristics such as: unreliable or poor payment histories; high loan-to-value ratios; high debt-to-income ratio; the loan is not secured on the borrower's primary residence; or a history of delinquencies or late payments on the loan.

Retail loans - loans made to individuals rather than institutions. The loans may be for car purchases, home purchases, medical care, home repair, holidays and other consumer uses.

Return on equity - profit attributable to ordinary shareholders divided by average shareholders' equity as a percentage.

Reverse repurchase agreement (Reverse repo) - refer to Sale and repurchase agreements.

Risk appetite - an expression of the maximum level of risk that RBS is prepared to accept to deliver its business objectives.

Risk asset ratio - total regulatory capital as a percentage of risk-weighted assets.

Risk elements in lending (REIL) – (IAS39) - impaired loans and accruing loans where the contractual principle or interest are overdue 90 days or more.

Risk-weighted assets (RWAs) - assets adjusted for their associated risks using weightings established in accordance with the CRD IV as implemented by the PRA. Certain assets are not weighted but deducted from capital.

Sale and repurchase agreements - in a sale and repurchase agreement one party, the seller, sells a financial asset to another party, the buyer, at the same time the seller agrees to reacquire and the buyer to resell the asset at a later date. From the seller's perspective such agreements are repurchase agreements (repos) and from the buyer's reverse repurchase agreements (reverse repos).

Securitisation - a process by which assets or cash flows are transformed into transferable securities. The underlying assets or cash flows are transferred by the originator or an intermediary, typically an investment bank, to a structured entity which issues securities to investors. Asset securitisations involve issuing debt securities (asset-backed securities) that are backed by the cash flows of income-generating assets (ranging from credit card receivables to residential mortgage loans).

Settlement balances - payables and receivables that result from purchases and sales of financial instruments recognised on trade date. Asset settlement balances are amounts owed to RBS in respect of sales and liability settlement balances are amounts owed by RBS in respect of purchases.

Significant increase in credit risk (SICR) - a framework incorporating both quantitative and qualitative measures aligned to the Group's current risk management framework has been established. Credit deterioration will be a management decision, subject to approval by governing bodies such as the Group Provisions Committee. The staging assessment requires a definition of when a SICR has occurred; this moves the loss calculation for financial assets from a 12 month horizon to a lifetime horizon. Management has established an approach that is primarily informed by the increase in lifetime probability of default, with additional qualitative measures to account for assets where PD does not move, but a high risk factor is determined.

Standardised approach - a method used to calculate credit risk capital requirements under Pillar 1. In this approach the risk weights used in the capital calculation are determined by regulators. For operational risk, capital requirements are determined by multiplying three years' historical gross income by a percentage determined by the regulator. The percentage ranges from 12 to 18%, depending on the type of underlying business being considered.

Glossary of terms

Standstill - is an agreement, usually for a specified period of time, not to enforce the lender's rights as a result of a customer breaching the terms and conditions of their facilities. This is a concession to the customer. A standstill is most commonly used in a complex restructuring of a company's debts, where a group of creditors agree to delay enforcement action to give the company time to gather information and formulate a strategy with a view to establishing a formal restructuring.

Stress testing - a technique used to evaluate the potential effects on an institution's financial condition of an exceptional but plausible event and/or movement in a set of financial variables.

Stressed value-at-risk (SVaR) - a VaR measure using historical data from a one year period of stressed market conditions. For the purposes of calculating regulatory SVaR, a time horizon of ten trading days is assumed at a confidence level of 99%. Refer also to Value-at-risk below.

Structured entity (SE) - an entity that has been designed such that voting or similar rights are not the dominant factor in deciding who controls the entity, for example when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. SEs are usually established for a specific, limited purpose, they do not carry out a business or trade and typically have no employees. They take a variety of legal forms - trusts, partnerships and companies - and fulfil many different functions.

Structured notes - securities that pay a return linked to the value or level of a specified asset or index. Structured notes can be linked to equities, interest rates, funds, commodities and foreign currency.

Subordinated liabilities - liabilities which, in the event of insolvency or liquidation of the issuer, are subordinated to the claims of depositors and other creditors of the issuer.

Tier 1 capital - a component of regulatory capital, comprising Common Equity Tier 1 and Additional Tier 1. Additional Tier 1 capital includes eligible non-common equity capital securities and any related share premium. Under Basel III, Tier 1 capital comprises Core Tier 1 capital plus other Tier 1 securities in issue, less certain regulatory deductions.

Tier 2 capital - qualifying subordinated debt and other Tier 2 securities in issue, eligible collective impairment provisions less certain regulatory deductions.

Total loss absorbing capacity (TLAC) - a Financial Stability Board requirement for global systemically important banks to have a sufficient amount of specific types of liabilities which can be used to absorb losses and recapitalise a bank in resolution. The implementation of the TLAC requirements is being discussed within local regulators.

Traded market risk - traded market risk is the risk arising from changes in fair value on positions, assets, liabilities or commitments in trading portfolios as a result of fluctuations in market prices.

US Federal Agencies - are independent bodies established by the US Government for specific purposes such as the management of natural resources, financial oversight or national security. A number of agencies, including, the Government National Mortgage Association, issue or guarantee publicly traded debt securities.

Value-at-risk (VaR) - a technique that produces estimates of the potential loss in the market value of a portfolio over a specified time period at a given confidence level.

Wholesale funding - wholesale funding comprises Deposits by banks, Debt securities in issue and Subordinated liabilities.

Write-down - a reduction in the carrying value of an asset to record a decline in its fair value or value in use.

Write-off – A reduction in the value of an asset when there is no realistic prospect of recovery.
